5. By sliding the line ℓ , it is observed that p takes the greatest value at A and the least value at D.

Putting $x = 0$ in ℓ_1 , $y = 6$

$\therefore A = (0, 6)$

The greatest value of $P = 22$.

Putting $y = -2$ in ℓ_4 , $x = -1$

$D = (-1, -2)$.

The least value of $P = -11$.

Alternatively

$A = (0, 6), B = (3, 4), C = (5, -2), D = (-1, -2),$)
) ...
 $E = (-3, 0)$)

The values of P at these points are respectively)

22, 17, -5, -11, -5)

$\therefore P$ takes the greatest value of 22 at A and the least value of -11 at D.
